

# Leap Walking

## **Gesture-Based Walking**

Corinna List | Daniela Neupert | Interaction Engineering | WS 17/18 | Prof. Dr. Michael Kipp

# Motivation

- Can walking with fingers be mapped to a game character?
- „Kinect“ for disabled people

# Related Work

Noah Lockwood, Karan Singh (2012): Motion Editing with Contact Based Hand Performance

- They used Finger-Walking to animate a character

# Concept

- Map the walking-gesture to the movement of a character
- Develop a jump'n'run-game to test the approach

# Setup

- LeapMotion tracks best horizontally
- Creating a Frame for the users orientation

# Interaction Techniques

Walking

# Demonstration

2

# Evaluation

- Difficult distinction between walking and non-walking gesture
- Walking is tiring for the hand

# Future Work

- Are there other possibilities to map the hand to the body?
- Which other gestures can be used?
- Could the hand positioning be different?

**Thanks for your attention!**
